IMAGE model scenario output (SSP2)
General Data
Building Specific data
Electricity Specific data
Transport Specific data
sva_pc.scn
Service Value Added (US$/capita)
pop.scn
rurpop.scn
Population (Total & rural/urban fraction)
gdp_ppp.scn
GDP (US$/capita)
res_floorspace.out
Floorspace (m² per capita)
GCap.out
Generation Capacity (MW)
LTTechnical.dat
Technology lifetimes (yr)
StorResTot.out
StorCapTot.out
Storage capacity (MW & MWh)
trp_trvl_pkm.out
Travel demand (pkm)
trp_trvl_Load.out
Loadfactor (e.g. ☺/car)
trp_trvl_Vshare_car.out
trp_trvl_Vshare_bus.out
trp_frgt_Vshare_MedTruck.out
trp_frgt_Vshare_HvyTruck.out
Vehicle share (e.g. % electric)
trp_frgt_Tkm.out
Freight demand (Tkm)
Builing Material Model (BUMA)
Stock calculation
Additional data:
% of population in 4 building types (%)
Avg. floorspace per building type (m²/cap)
Regression parameters of service floorspace demand
In-use stock: m² of floorspace for 4 residential building types & 4 commercial building types
Dynamic Stock Model
Weight, Material and lifetime data:
Building materials per building type (kg/m²)
Building lifetimes (yr)
Stock, Inflow & Outflow of 7 materials in 4 residential building types & 4 commercial building types
Electricity Material Model (ELMA)
Stock calculation
Additional data:
Car Mileage (km/yr)
Current HV grid line length (km)
High/Medium/Low Voltage ratios
Other infrastructure (transformers) (unit/km)
Storage technology prices (US$)
Storage energy density (kg/kWh)
In-use stock: Km of grid-line, nr of stations/transformers, kWh storage capacity
Dynamic stock Model
Weight, Material & lifetime data:
Gridline materials (kg/km)
Stations & transformers materials (kg/unit)
Storage technology composition (wt%)
Lifetimes of batteries, lines & other infra (yr)
Stock, Inflow & Outflow of 9 materials in power lines, infrastructure and stationary electricity storage
Vehicle Material Model (VEMA)
Additional data:
Battery sales share by batt. type (%), from ELMA
Vehicle mileage (km/yr)
Average total load (in persons or tons)
Average vehicle load/occupation (in %)
Stock calculation
In-use stock: Nr. of cars, trains, buses, boats, bicycles, trucks, airplanes
Weight & Material data:
Battery weight per vehicle type (kg)
Average vehicle weight (kg)
Vehicle lifetime (yr)
Material composition per vehicle (wt%)
Dynamic Stock Model
Stock, Inflow & Outflow of 14 materials in 13 different vehicles
R Region specific data
T (Generation) Technology specific data
M Mode specific data
V Vehicle type specific data
